

Wireless Studio Ver.5.63 is released.

This installer includes manuals in the following languages: English, Japanese, French, German, Italian, and Spanish. Please refer to these or the instruction manuals included with your receiver (DWR-R03D, etc.) or transmitter (DWT-B30, etc.) as necessary.

[Changes in Ver.5.63]

1. Supported for the new transmitter “DWM-30” which will be released around summer 2025.
2. Added a frequency direct input function to quickly change the frequency between the transmitter and receiver.
 - * Entering a frequency, candidate values are displayed, so you can set it without knowing the exact value.
3. Added a Select All/Cancel button to the Target Band selection screen of Channel Plan Adviser.
4. Improved so that Cross Remote prohibited bands cannot be set when using the following bands: Japan: CH37, Europe: CH39.

[System requirements]

The Wireless Studio Ver.5.63 has been tested under the following conditions.

- Operating system
 - Windows 10 22H2
 - Windows 11 24H2
- Memory
 - 8 GB or more
- Free Hard Disk Space
 - 8 GB or more

Notes : These test results may not apply to all computers.

[Installing Wireless Studio]

To obtain this software, search for the product model name, such as DWR-R03D, on the website below.
(If necessary, select your region and language in “Change Country, Region or Language”)

<https://pro.sony/product-resources/product-resources-search>

Unzip [WirelessStudio_5_63_win.zip].

Double-click the extracted installer and follow the installer's instructions.

This installer will uninstall the old version first before installing, so you can update from any version. The settings you made on the transmitter and receiver with the previous version of Wireless Studio will be carried over to the latest version.

[Restrictions]

Wireless Studio has the following limitations.

- Dante Audio monitoring function (supported in Ver.5.40 or later)

To use this function, you need the DWR-R03D and Audinate's optional software DVS (Dante Virtual Soundcard). On a PC that does not have DVS installed, the “Monitor” button will be displayed as Disabled, and you will not be able to monitor Dante IP audio on the PC. (See the included help guide.)

- About turning off the receiver while linked

If you turn off the receiver while it is online with Wireless Studio and connected to the transmitter via Cross Remote, it may take about 10 seconds for the screen updates on Wireless Studio.
